

E-Tallyman Log Scanner and Sorter

Machine Specifications

Log Diameter (mm) – 80 - 750

Log Length (mm) – 900 and up

Bins – 8 and up

Other Feature Available:

- **Log Singulation**
- **Rotate log for orientation**
- **Sort logs into multiple bins**

The new E-Tally log scanner and sorter from Pinnacle allow for accurate scanning of a sawmill or lumber yards' log intake or throughput. Key features of the Scanner and Sorter include:

- Record log length, thickness, processed time and date
- Live view and or store the log data for historical viewing.
- Data automatically backed up to internal storage during a power outage
- Remote viewing capability of production figures
- Generate reports of log data.
- Ability to stream to an SQL server
